

External Quality Assessment Program for **HSV1&2 / VZV / *T. pallidum*, nucleic acid detection**

Labquality is announcing a new EQA pilot study for nucleic acid detection of four pathogens included in a four-plex sample:

Herpes simplex virus-1 (HSV-1)

Herpes simplex virus-2 (HSV-2)

Varicella zoster virus (VZV)

Treponema pallidum (TP)

The pilot study is intended for test panels detecting one or several of the above pathogens and scoring will be performed accordingly based on qualitative results.

The pilot study will include two swab samples that should be analysed as regular patient samples. The participants submit their results through the electronic platform LabScala and results are processed by the EQA Coordinator. Result evaluations will be published in the final report distributed to the participants.

HSV1&2/VZV/*T. pallidum*, nucleic acid detection

- Samples:** 2 non-infectious swab samples
Distribution: 1, 2022 May – pilot study free of charge
Participation: Limited number of samples available
Registration: Please register by **May 15th 2022** only through **this link**
